

Medical Case Management

It can happen to anyone of us, at any time and without warning. An unexpected accident, or a disabling illness. Either way we are suddenly thrown into a world of uncertainty, with little knowledge of what to do or to how to get out.

You can trust our nurses to lead you through.

What separates our expert Medical Case Management staff from the rest is the fact that we do it right the first time. Knowledge, dedication, commitment, reputation, ethics, all combine to help the injured and disabled individual return to a productive lifestyle.

Our nurses are known and respected in the industry for our quality, expertise and results oriented approach to case management. Our presence is not only welcomed by medical professionals but often sought out, to be the ones to who can build a team dedicated to recovery. We get results.

A disability is costly. Measured in terms of a disrupted life, lost productivity, and medical expenses, effective case management changes this. By reducing the impact of the injury we reduce cost.

Our nurses specialize in the care for short and long term needs, for surgical and non surgical injuries, from the frustratingly simple to the most catastrophic injuries, we do make a difference.

Spanish and Polish speaking case managers, are also on staff to serve you.
